#### **DETAILED ACTION**

### Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 09/05/2003 has being considered by the examiner.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 31-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Larussa in view of Machtig et al.

Larussa (US Patent Number 6,318,868 B1) discloses apparatus (210) for producing an aerial image (218) of an object (214) comprising a housing including a window therein (Figure 8), support means (224) for an object (214) to be displayed as an aerial image (218) outside of said window; means for illuminating the object to be displayed (column 5, lines 13-16); video display means within said housing coupled to said video for producing in said housing an image of the object (column 5, lines 16-20); a beamsplitter (34) in said housing positioned at approximately 45 degrees with respect to said video display of the object (14), said beamsplitter (34) also positioned respect to said window of said housing, at approximately 45 degrees with a focusing reflector (12)

Application/Control Number: 10/655,974

Art Unit: 2851

in said housing directed at said beamsplitter (34) for receiving a partially reflected image of said object from said video display and for reflecting the image of the object out of said window to form an aerial image of the object outside of said housing (column 4, lines 20-38).

Larussa teaches the salient features of the present invention, except a video camera means within said housing directed toward the object to be displayed, wherein said video camera and illuminating means and the object are located in a light sealed enclosure within said housing, including support means outside of said housing including a platform located in the region of the aerial display of the object whereby the aerial image of the object displayed appears to rest on said platform. However, Larussa discloses computer operated displays (column 6, lines 41-42) and CRT to generate a luminous image (column 5, lines 21-22).

Machtig et al. (US Patent Number 6,042,235) discloses a video camera means (250) within said housing (248) directed toward the object to be displayed (240), wherein said video camera (250) and illuminating means (190) and the object are located in a light sealed enclosure within said housing (248), including support means outside of said housing including a platform located in the region of the aerial display of the object whereby the aerial image of the object displayed appears to rest on said platform (column 19, lines 27-31).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to utilize the video camera, illuminating and support means disclosed by Machtig et al. in combination with Larussa's invention, for the purpose of

Application/Control Number: 10/655,974

Art Unit: 2851

having a device to be contained in a display housing that is compact and can be used for entertaining video games, advertising kiosks, among numerous other uses (column 4, lines 14-17).

## Allowable Subject Matter

- 4. Claims 20-22, 27-30, 37-38 and 40-44 are allowed.
- 5. The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not teach an apparatus for producing an aerial image of an object, comprising in combination with the additionally recited elements, partially silvered planar mirror positioned in the optical path of light rays from said illuminated object; whereby light rays from said object are partially reflected by said partially silvered beamsplitter toward said focusing reflector, and then reflected and focused by the focusing reflector directly through said partially silvered beamsplitter and through said window to produce an aerial image of said object outside of said housing; means for preventing an observer who is viewing said aerial image from seeing reflected images from outside of said housing in said window.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Magda Cruz whose telephone number is (571) 272-
